WILLIAM FREDERICK KOCH, PH. D., M. D.
8181 EAST JEFFERSON AVENUE
DETROIT, MICHIGAN

June 18, 1942

Dear Doctor

You probably know that we have been given a wonderful opportunity by the Federal Government to demonstrate what our treatment is good for and once and for all to crush the adverse propaganda that has been waged against us by certain mercenary groups.

I have been waiting for an opportunity of this kind for a long time because some years ago I was advised by one of the biggest justices in America (a patient of mine in Washington) that to sue the American Medical Association because of libelous statements would bring me nowhere. He told me that they could spend twenty millions to every million I could spend and that I would be eighty years old before I could get a judgment and then it would be only worth ten cents. So I decided it would be the best policy to saw wood and wait for an attack and the attack has come.

I believe this attack arose because of the trip I took to Brazil last summer. This trip was intended to be a vacation but it turned out to be one of the busiest seasons I have ever had. The ship doctor was taken off the boat by the draft two hours before it sailed for South America and they had no prospective physician and offered the job to me. We were only out a couple of days when an important Brazilian diplomat had a terrific hemorrhage from the stomach. It looked as though he were to die but I happened to have some Benzoquinone with me and gave him an injection. The bleeding stopped immediately,

did not return and he recovered rapidly. Several lumps on his body disappeared during the two weeks it took to reach Rio and he rapidly gained strength and was up and about, eating cautiously, when we arrived. His family physician, who is an important professor at the university there, was astounded at the results obtained and introduced me to the Government tuberculosis institution, the leprosy sanitarium, the Army Hospital, and others and in the three months that I was there we cured some very bad cancer cases and some far advanced tuberculosis cases and some moderately advanced leprosy cases besides allergies and diabetics. In the Army Hospital our success with the acute infections was beyond their expectation and patients that had failed to get any results on sulfa drugs recovered very quickly by using the Benzoquinone. We had some successes in the insane asylum too.

All this made it appear to the drug industry, which is North American practically entirely, that if these institutions adopted the treatment as a regular measure as they intended to do, their sales would be very much less. The Minister of War did adopt the treatment and I had planned on teaching them the procedure of its preparation.

Just about that time I received a notice that the Federal Food and Drug Administration wanted to discuss my label with me so I came back for that purpose. I was arrested to be placed under ten thousand dollar bond in Miami. The United States Commissioner there said that such a bond was outrageous, that the charge was simply a dispute over a label, and he thought that a nominal bond would be sufficient. But the District Attorney there said that he had to insist on a ten thousand dollar bond because the District Attorney in Detroit telephoned him the night before telling him that it must be a ten thousand dollar bond so I could not leave the country and that I had started some work in Brazil and that they did not want me to go back and finish it and that when the Government got through with me, I would be all washed up and could not go anyway. I have affidavits that verify this statement.

One can easily deduce that the drug industry,

which probably is protected through Mr. Morris Fishbein, had a good deal to do with this affair. But it makes little difference how it happened. The fact is that it has happened, and now I have my opportunity to demonstrate to the world that our treatment is successful and hereafter the malicious statements that have been made against us will have to cease and, moreover, patients will come to us before they are physically and financially depleted and then we will be able to do much better work and have to sign fewer death certificates for the surgeons and radiologists.

I believe you have been waiting for this explanation of what has been going on, especially since the scurrilous statements made in the newspapers by the Government would distress anyone.

I wish to say, also, that the F.B.I. agents, that have been investigating my cured cases for the last few months, started out telling these people that they never were sick and that the treatment they got was nothing but water anyway, and in one instance the poor old woman had to call in the neighbors to help her out. Now these same agents that are visiting cured patients are saying that what they have observed is most wonderful and that they have had so many good reports from cured patients that they are tremendously enthusiastic.

We will make a demonstration in court that will be conclusive and I believe that after this is over, you will not be annoyed by antagonistic statements on the part of anyone and you will be able to give fuller service to the sick than ever before.

If there are any questions about the matter that you wish to ask, please do so.

Very sincerely yours,

WFK:MK
