

Prof. Dr. Ana Aslan

WHAT
IS
GEROVITAL?

POSTPONING OLD AGE

Mankind's oldest dream — eternal youth — is no longer just a dream. The search for the "Fountain of Youth" continues, not in undiscovered lands, but in the laboratories of Professor Dr. Ana Aslan's clinics.

During the past twenty years, inside these laboratories, one of the most important contributions to this search has been the discovery and development of **GEROVITAL H3**.

On September 5, 1956, 500 physicians, representing 13 countries, assembled in Karlsruhe, Germany. Romania's representative, Professor Dr. Ana Aslan delivered a paper entitled "Treatment with Gerovital Applied to Aged People." The audience of highly respected professionals in all fields of medicine listened to Prof. Dr. Aslan in shocked silence. That something could be done about the paralyzing effects of old age was a dream — not a reality.

But their shocked silence soon turned to cheers and applause. For Prof. Dr. Aslan concluded her presentation by showing films taken at the Geriatrics Institute of Bucharest of patients who had undergone Gerovital treatment.

One of the most amazing cases shown in the films was that of P.S. — a mathematician whose scholarly works were internationally recognized. At the age of 90, decrepit and crippled, P.S. was unable to read, was completely deaf, and his once great intellect was rapidly deteriorating to senility. Confined to his bed, P.S. was in a vegetable-like state, a victim of old age.

Under the direct supervision of Prof. Dr. Aslan, P.S. was treated with Gerovital. In less than a year of these treatments, P.S. began to read newspapers and comment on world affairs! At the time Prof. Dr. Aslan presented her startling paper to a skeptical audience, P.S. was 98, climbing the steps of the Geriatrics Institute at great speed, writing verse, and pestering the staff physicians to let him go to the seashore for a more exciting holiday!

Nearly twenty years have passed since Prof. Dr. Aslan first introduced Gerovital to the world and today, Gerovital H3 is known the world over. Often referred to as the "miracle drug," its power to prolong man's physical and mental activities despite his age is universally acknowledged. And what else is "Youth" if not strength of mind and muscular power?

PROF. DR. ANA ASLAN ANSWERS YOUR QUESTIONS

The managing board of the Carpati-Bucharest National Tourist Office asked Prof. Dr. Ana Aslan to describe and comment on the qualities and effects of Gerovital.

In reply to the request of the National Tourist Office, Prof. Dr. Ana Aslan selected the questions most frequently asked by patients abroad to answer. They are presented here, in full, in response to the many inquiries about Prof. Dr. Aslan's work.

"What is Gerovital?"

"In layman's language, Gerovital is an energy-giving drug, which increases the strength of the mind, improves the memory, eliminates depression and anxiety, and increases the ability to function physically. The drug works at the cellular level, influencing the level of the cellular membrane, and at the inter-cellular level restores those cells which usually regenerate only very slowly, and sometimes not at all, in aging people.

"Gerovital also stimulates the activity of procaine which is a stimulative substance of the cellular functions.

"In summary, Gerovital is a eutrophic vitaminic drug used as a regenerative in the treatment of aging phenomena and in other nutritive and metabolic disturbances."

Mud Therapy Eforie Nord

"What can Gerovital treatments do for the strain and pressures of daily life in our fast-paced society?"

"Gerovital provides a balance between the many stresses of life in today's society. The drug restores the equilibrium of the central nervous system and increases the capacity of the body's physical resistance to the fatiguing strain of the rhythms of modern life. It is also a biological protector. Gerovital is, therefore, a very important drug for our era."

"In which cases do you recommend it?"

"We are all growing old, but the important thing is *how* and *when* we grow old. Therefore, one of my primary recommendations for the use of Gerovital is for its effect on *delaying* the aging process. We have firmly established the prophylactic properties of Gerovital on the aging process.

"In our twenty years of research and experience with Gerovital, we have concluded that when the drug is administered at an early age, it prolongs mental and physical activity, prevents cerebral accidents connected with arteriosclerosis, and maintains normal metabolism which is often unbalanced in the aging process.

"I also recommend its use for patients already suffering with physical and mental asthenia, coronary and peripheric arteriosclerosis, as well as in degenerative rheumatisms.

"I have obtained outstanding results in the treatment of Parkinson's disease, of parodontosis, and of various skin diseases — excema, alopecia, and psoriasis. Gerovital's use in the treatment of general sequelae after post-myocardic infarct and hemiplegia, of bronchial asthma and of gastric and duodenal ulcers have also brought excellent results.

"We have also established the beneficial effect of Gerovital treatments on disturbances in the endocrine glands and the nervous system. Although Gerovital contains no hormones, it has a definite rejuvenating effect on the patient's physical appearance.

"Patients undergoing Gerovital treatment are also simultaneously provided with cosmetic treatments from Gerovital derivatives, which are effective against baldness, against wrinkles, and for skin freshness.

"In summary, our work is dedicated to the rejuvenation both in mind and in body of our patients. And we have seen our previously incapacitated, aging patients undergo Gerovital treatments and respond with strikingly youthful vigor in mind and body."

"At what age should treatment with Gerovital be started?"

"At forty. Don't be surprised! It's not too early. Professor Dr. C. I. Parhon, my professor, theorized that aging begins in the embryonic stage. We are not yet so advanced in gerontology to know exactly when the deteriorating aspects of aging begin. But we do know that after age 40, the mental and physical capacity begins to diminish. Because the properties of Gerovital increase mental and physical capacity, I recommend it at 40 for its preventive factors. I would also recommend it earlier than 40 in cases where deterioration of the mind and body has been diagnostically determined."

"Who are your patients?"

"When I am asked that question—and I am asked it often—I suffer with sudden loss of memory! However, some of my patients have publically announced their Gerovital treatments and the incredible rejuvenation they have experienced. One such patient is the American actress, Lillian Gish, who had retired from the stage, but since taking Gerovital treatments, has made a comeback which even includes television appearances! Miss Gish has stated that her present activities are *entirely* due to Gerovital treatment. Also poet Miguel Angel Asturias who has declared that his present activity is due in large part to Gerovital treatment. He has written to me that he is telling everyone about Gerovital."

"Are you satisfied with the results obtained by Gerovital treatment?"

"As a scientist I am never satisfied! And I am sure that the future will see still more outstanding achievements in gerontology obtained both from my team and by scientists from other countries. But for the present, I am very satisfied with the results of Gerovital treatment, because they are far beyond those achieved by any other drug of this nature both in practice and in medical literature."

"Are the patients also satisfied?"

"They must be—The constant increase in the number of people seeking Gerovital treatment and their knowledge of the drug itself is a sign that previous patients have been spreading the word! And certainly they wouldn't recommend it, if they were not satisfied."

Investigations for establishing the Gerovital treatment

With our modern technical and advanced scientific equipment, our geriatrics clinics have the capacity not only to diagnose functional disturbances in the various systems and organs of the body, but also to establish the rhythm of aging processes—harmonious, premature or segmentary, and premature aging of a single organ. Geriatric treatment is recommended according to these medical diagnoses.

Aslavital, another new drug, allows a more precise application of the geriatric treatment to some associations of various diseases. Different alterations in the organic phase have priority with this new product.

Gerovital is used alone and in conjunction with specific drugs required for each secondary disease. Diet is also established for each individual case as are associated therapeutic treatments such as physio-electrotherapy.

A medical file, comprising a synthesis of the data gathered during the hospitalization period, is given to foreign patients to be presented to their physicians in their native countries along with further treatment recommendations. When leaving the clinic, patients are supplied with hygienical and dietetical prescriptions for care and prevention of disease associated with the aging process.

We want to emphasize that geriatric clinics are not only clinics for old people, but also for preventing diseases of old age and for prolonging youth. Our proof is that our youngest patient is 37, the oldest 98.

The shortest period of time recommended by physicians for treatment with Gerovital is 14 days, but there are cases when after the medical check-up and the laboratory analyses, just a few days of treatment are prescribed.

When leaving Romania the patient is allowed to purchase the quantity of Gerovital necessary for one-year's treatment.

I. BUCHAREST AND SURROUNDINGS

The Geriatrics Institute—
Bucharest

Single rooms with bathroom; surgeries, laboratories.

The Otopeni Sanatorium
(17 km from Bucharest)

Suites or double rooms; laboratories, surgeries, physiotherapeutics cabinets; gymnasium, natural park, spacious halls, concert room, cinema, tennis lawn, parking.

The Buftea Castle

(20 km from Bucharest)

Suites or single and double rooms; surgeries; natural park on the bank of the lake, spacious halls, sports grounds (volleyball, tennis, bowling), angling, boating.

Villas at Snagov

(39 km from Bucharest)

Single and double rooms with bathroom; surgery; bracing natural scenery, terraces facing the lake.

Hotel Nord In

Bucharest

Deluxe rooms and geriatric wing with fully staffed medical facilities.

II. SEASIDE

Eforie Nord

Europa hotel (de luxe); Diana hotel (first class); The *Grand* Polyclinic.

Mangalia Nord

Neptun hotel (de luxe).

III. IN OTHER PARTS OF THE COUNTRY

Herculane — Hercules Complex

Baile Felix — Nufarul hotel and the Felix Sanatorial Complex.

IV. OUT-PATIENTS' TREATMENT

Besides the above-mentioned treatment possibilities, there is also out-patients' treatment. So, tourists staying at any hotel in Bucharest can benefit, on request, by the medical services of the Bucharest Geriatrics Institute.

Herculane— Hotel Hercules

Hotel Nord— Bucharest

HEALTH TOURS

CSA

GEROVITAL

15 DAY DELUXE TOUR, INCLUDING GERIATRIC TREATMENT ROUND TRIP AIR TRANSPORTATION
FROM NEW YORK TO BUCHAREST, ALL MEALS, SIGHTSEEING AND TRANSFERS FROM:

BUCHAREST, ROMANIA

\$907*

*Departures every Monday
from May 1973*

PROGRAM

- 1st Day:** Depart NEW YORK by Trans Atlantic Jet flight to BUCHAREST, Romania.
- 2nd Day:** Arrive BUCHAREST. Meeting and transfer to HOTEL NORD.
- 3rd Day:** After breakfast, beginning of the medical consultations — radiological examination — laboratory tests and first prescription of Geriatric treatment.
- 4th Day:** Geriatric Treatment. Rest of day free for you to become acquainted with the beautiful city of BUCHAREST. A special representative of the Romanian Tourist Office will be on hand at your hotel to advise you regarding items which may be of interest to you.
- 5th Day:** Geriatric Treatment. An evening at the Opera.
- 6th Day:** Geriatric Treatment. A good day to go shopping for Romanian handicrafts.
- 7th Day:** Geriatric Treatment. In the evening a visit to the famous Rapsodia Theater for a show of Romanian folklore and music.
- 8th & 9th Day:** Geriatric Treatment. Take advantage of spare time to visit the fascinating museums of varied interests in this city.
- 10th Day:** Geriatric Treatment. A Romanian evening at the "Padurea Baneasa" Restaurant, for a typical Romanian gourmet dinner with wine and music.
- 11th Day:** Full day in Sinaia, in the Carpathian Mountains, including a visit to the ornamental art exhibition at the Peles Museum. Lunch at the Palas Restaurant, then on for a visit to the Sinaia Monastery and the Memorial House of world renowned artist N. Grigorescu, ranked among the worlds finest painters. Return to BUCHAREST in the evening.
- 12th & 13th Day:** Geriatric Treatment.
- 14th Day:** Geriatric Treatment. A tour of BUCHAREST by night around the lovely night spots of the Romanian Capital with samplings of wine to toast good-bye to BUCHAREST.
- 15th Day:** After early breakfast transfer to the airport for departure.

For individual arrangements: The land cost is \$535.00, based on double occupancy, which can be combined with the following air fares.

	Basic	Shoulder	Peak
14/21 day	\$552.00		\$621.00
22/45 day	382.00	\$409.00	472.00

*Based on minimum of 15 passengers GIT fares, and based on double occupancy.

WHAT IS GEROVITAL?

by Dr. Ana Aslan

"Gerovital is an energy-giving drug which increases the strength of mind, and physical power, improves memory and eliminates depression and anxiety. It works at the cellular membrane, and at the inter-cellular level regenerates the cells which usually recover much slowly at aged people and some of them do not regenerate at all.

Gerovital is an associated drug which stimulates the activity of procaine which is also a stimulative substance of the cellular functions.

Gerovital is, in fact, an eutrophic vitaminic drug used as a regenerative in the treatment of ageing phenomena and in other trophic disturbances."

We are all growing old, but the important thing is how and when do we grow old. Thus, I recommend it for delaying as much as possible the ageing effects. I consider Gerovital as a prophylactic factor of great individual and social utility. On the basis of our twenty-year experience we have reached the conclusion that when used earlier, Gerovital prolongs physical and psychic activity till very old ages, prevents cerebral accidents connected with arterosclerosis, and gives way to a normal and harmonious ageing. I recommend it in connection with the fact that we grow old, in cases of physical and psychic asthenia, in cerebral, coronary and peripheric arterosclerosis, as well as in degenerative rheumatisms. It is one of the best anti-depressives.

ABOUT ROMANIA

With an area of 91,700 square miles, Romania ranks as one of Europe's middle-sized countries, about the size of Britain. It has 1,609 miles of frontier.

To the west are Hungary and Yugoslavia, to the south Bulgaria and to the east and north, the Soviet Union.

The Transylvania Plateau, rising to the heights of 2,640 feet, is surrounded by the Carpathian Mountains, which rise to more than 8,250 feet. The Carpathian foothills slope off into fertile plains — the country's granary — which spread toward the Black Sea, the Danube and the western frontier.

The Romanian coast along the Black Sea stretches 152 miles. Highest mountain peaks are Moldoveanu (8,392 ft.), Negoiu (8,365 ft.), Paringu Mare (8,309 ft.) and Omu (8,273 ft.).

Tourists wishing to visit Romania will find it an exceptionally easy country to enter requiring only a valid passport and a visa.

A visa is granted individually or for groups by all the diplomatic and consular offices of Romania around the world and at all border points open to tourist travel.

No special forms or photographs are required and the visa is granted free of charge.

A tourist visa is also granted to persons who travel in Romania in an official capacity or on business and wish to visit the country as a tourist after the expiration of the usual visa. Persons in transit through Romania who wish to stay on as a tourist can also receive a visa quickly and easily.

Terms of the visa vary from three to 60 days and can be extended for up to 120 days.
